

# National Eye Institute Annual Report : October 1, 1987-September 30, 1988 Report of the Scientific Director (Classic Reprint)

Jin H Kinoshita

Excerpt from National Eye Institute Annual Report: October 1, 1987-September 30, 1988 Report of the Scientific Director The project involves the study of the physiological organization of neurons of the visual system of primates. Studies were carried out to characterize: (1) the chromatic organization of the peripheral region of the center-surround organization of the receptive field of color-opponent ganglion cells, and (2) the degree of heterogeneity of properties among color-opponent ganglion cells whose receptive fields are located in the retinal periphery. During the period covered, analyses of some prior studies were completed, and results are being prepared for publication. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works.
