

# Natural Pathways in Panama

Millard C Davis

That part of the Western Hemisphere we call Panama joins two giant continents, and so we have found a unity. Part of that unity is the natural plant and animal life there, and here we enter in as we make our own pathways into it. This was the Panama Canal Zone of the days just before and just after the removal of dictator Noriega, so included are times and places with the U.S. military, especially with American military families.
