

Natural Science and the Planet Earth

Dr Jack Sommer, Read by Edwin Newman, Edited by Mike Hassell

Alexander von Humboldt and other sparked a centuries-long debate about natural history and geological destiny by discussing what today we call the environment. Some now believe the earth cannot safely accommodate its growing burdens other say longer life spans and more people are signs of progress. Are humans destroying the earth or building a better world? Will the future bring despair and destruction, or hope and improvement? The Science and Discovery Series recreates history's four-thousand-year journey of scientific progress. Science has often challenged and upset conventional wisdom. This is a story of vested interests and independent thinkers, experiments and theories, change and progress.
