

Natural and Statistical View, or Picture of Cincinnati and the Miami Country, Illustrated by Maps : With an Appendix, Containing Observations on the Late Earthquakes, the Aurora Borealis, and South-West Wind (Classic Reprint)

Daniel Drake

Excerpt from Natural and Statistical View, or Picture of Cincinnati and the Miami Country, Illustrated by Maps: With an Appendix, Containing Observations on the Late Earthquakes, the Aurora Borealis, and South-West Wind There are but two considerable rapids. The first, called Le Tarts, is about 230 miles below Pittsburgh. It is a ripple caused by rocks - rather dangerous in low water, perceptible when the water is at a mean height, but net discoverable in moderate floods. The other, 560 miles below Pittsburgh, opposite the town of Louisville, called, by way of pre-eminence, the falls, has a descent of 22 1-2 feet in two miles. The bed of the river consists of stratified, level, limestone. In low water, loaded boats cannot descend in a medium flood, they pass down in safety, under the direction of a pilot. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works.
